

February 22, 2011

To whom it may concern,

Goslyn Environmental Systems

I confirm that Concordia University purchased a GOS40 grease trap from Goslyn Environmental Systems and that installation was completed on January 5th, 2011. This trap was installed under a dish washing sink in a medium sized commercial kitchen serving hundreds of students a day. To date, this grease trap has been operating without incident and helping to reduce the environmental impact of the kitchen.

Sincerely,

Daniel Gauthier Jr. Eng.
